## **DETAILED ACTION**

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - Claims 1-11 and 36-38, drawn to polyester and alkyd polymer dispersion, classified in class 525, subclass 437.
  - II. Claims 12-35, drawn to a method for forming a polymer dispersion, classified in class 528, subclass 272.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the method of Invention II can be used to form polyesters not containing secondary and/or tertiary hydroxyl groups.
- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

## Election of Species

4. This application contains claims directed to the following patentably distinct species of the claimed invention:

For the polyester/alkyd dispersion:

Ester linkages formed from secondary hydroxy groups;

Ester linkages formed from tertiary hydroxy groups;

Ester linkages formed from secondary and tertiary hydroxy groups;

Ester linkages formed from secondary hydroxy groups with backbone linkages formed from primary hydroxy groups;

Ester linkages formed from tertiary hydroxy groups with backbone linkages formed from primary hydroxy groups; and

Ester linkages formed from secondary and tertiary hydroxy groups with backbone linkages formed from primary hydroxy groups.

In addition to the above, applicant is required to elect a single species disclosed for the polymers produced, i.e. whether the polyester/polyalkyd polymers contain linkages formed form epoxy compounds and cyclic carbonates, oils, fatty acids, monofunctional acids, mono-functional alcohols, and hydrophilic moieties. If any of these additional units are elected, election of specific species for each of these units is required as set forth in claims 9, 16-19, and 30.

Applicant is also required to elect a single species disclosed for the polyols giving rise to the secondary hydroxy groups as set forth in claim 4.

Applicant is required to elect a single species disclosed for the polyols giving rise to the primary hydroxy groups as set forth in claims 6, 11, and 14.

Last, applicant is required to elect a paint composition, ink composition, or adhesive composition as set forth in claims 36-38.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeffrey B. Robertson whose telephone number is (571) 272-1092. The examiner can normally be reached on Mon-Fri 7:00-3:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Randy P. Gulakowski can be reached on (571) 272-1302. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
